

BaseDEX — Investor Pitch Deck

Decentralized Perpetual Futures & Spot Exchange on Base Network

Confidential — April 2026

Slide 1 — Title

BaseDEX *Trade Everything. Own Everything.*

The first institutional-grade perpetual futures and spot DEX natively built on Base network.

 - **Twitter:** @BaseDEXfi
 - **Telegram:** t.me/BaseDEXOfficial
 - **Email:** founders@basedex.fi
-

Slide 2 — The Problem

\$45B+ daily volume is leaving DeFi for CeFi — because DeFi is broken

Current DeFi derivatives landscape:

- Fragmented liquidity across dozens of L1/L2 chains
- Ethereum mainnet gas fees make small trades uneconomical (\$10–50 per trade)
- 2–5 second settlement on Optimism/Arbitrum vs. 600ms on Base
- Existing perp DEXs (dYdX, GMX, Synthetix) require complex multi-step onboarding
- No compelling Base-native derivative protocol despite Base's 40M+ active users

The result: 78% of crypto derivatives volume still flows through FTX successors, Binance, and Bybit — centralized, counterparty-risky, and KYC-heavy.

Slide 3 — The Solution

BaseDEX: Institutional-grade derivatives, consumer-grade UX

Core value proposition:

- ⚡ **Sub-200ms order matching** via off-chain matching engine, on-chain settlement
- 🔑 **Non-custodial, no KYC** — connect wallet, trade immediately
- 💰 **Deep liquidity** — seeded order books with market maker incentives
- 🛡️ **Audited smart contracts** — 10 findings resolved, zero critical findings in production
- 🌐 **Base-native** — tap into Base's 40M+ wallet ecosystem and Coinbase distribution

Markets supported:

- **Perpetuals:** ETH, BTC, SOL, DOGE, AVAX, cbBTC, cbETH, AERO, ARB, LINK, POL (11 markets)
 - **Spot:** ETH/USDC, BTC/USDC, ETH/USDT, BTC/USDT, SOL/USDC, SOL/USDT, DOGE/USDC, + 5 more
-

Slide 4 — Market Opportunity

The global crypto derivatives market is \$3.2 trillion/month — and growing

Market	Size	Growth
Global crypto derivatives volume	\$3.2T/month	+41% YoY
DeFi derivatives share	\$85B/month	+118% YoY
Base ecosystem TVL	\$12.8B	+320% YoY
Base daily active users	4.2M	+88% YoY
Addressable Base DeFi traders	~800K	Est. 2026

Key insight: Base is the fastest-growing EVM L2, with Coinbase's 100M+ users as a direct distribution funnel. No institutional-grade perp DEX exists on Base. We are the first mover.

Slide 5 — Competitive Analysis

How we compare

Feature	BaseDEX	dYdX v4	GMX v2	Hyperliquid
Chain	Base	Cosmos	Arbitrum	HyperEVM
Latency	<200ms	<500ms	1–2s	<200ms
Leverage	20×	20×	50×	50×
No KYC	✓	✓	✓	✓
Spot markets	✓	✗	✗	✓
Coinbase integration	✓	✗	✗	✗
Base-native tokens	✓ (cbBTC, cbETH, AERO)	✗	✗	✗
Smart contract audit	✓	✓	✓	Partial
Gas per trade	~\$0.03	~\$0.00	~\$0.15	~\$0.00

Our moat: Base-native token support (cbBTC, cbETH, AERO), Coinbase ecosystem access, and institutional-grade architecture at consumer prices.

Slide 6 — Product

Professional-grade trading interface

Trading features:

- Real-time order book with depth visualization
- TradingView-powered charts with 50+ technical indicators
- One-click market orders and limit orders
- Reduce-only orders and stop losses
- Position management with real-time PnL
- Funding rate display and historical data

Technical architecture:

Performance metrics:

- Order matching: < 5ms (off-chain)
- Settlement finality: ~2 seconds (Base block time)
- Uptime target: 99.9%
- Supported wallets: MetaMask, Coinbase Wallet, WalletConnect, Rainbow, + 200 more

Slide 7 — Traction & Milestones

Where we are

Completed:

- ☒ Smart contracts deployed on Base Sepolia (testnet)
- ☒ Full trading interface launched (perpetuals + spot)
- ☒ Security audit completed — all critical/high findings resolved
- ☒ 11 perpetual markets live + 12 spot markets
- ☒ CoinGecko price oracle integration
- ☒ Landing page, blog (47 posts), full SEO implementation

Upcoming (Q2–Q3 2026):

- ☐ Base mainnet deployment
- ☐ Market maker program launch (5 initial MMs)
- ☐ Mobile app (React Native)
- ☐ Cross-chain support: Arbitrum integration
- ☐ DAO governance token launch
- ☐ Institutional API (REST + WebSocket)

Slide 8 — Business Model

Multiple revenue streams, fully on-chain

Revenue Source	Rate	Est. Monthly (at \$100M volume)
Taker fee	0.06%	\$60,000
Maker rebate (negative)	-0.01%	-\$10,000
Liquidation fee	0.50% of liquidated notional	Variable

Protocol treasury (future)	20% of fees	\$10,000
----------------------------	-------------	----------

Path to \$1B monthly volume:

- Month 1–3: Market maker seeding → \$5–20M/month
- Month 4–6: Community growth → \$20–100M/month
- Month 7–12: Institutional onboarding → \$100M–1B/month

At \$1B/month volume → ~\$500K/month protocol revenue

Slide 9 — Go-To-Market Strategy

Three-phase growth playbook

Phase 1 — Liquidity Bootstrap (Month 1–3)

- Partner with 3 professional market makers
- Launch liquidity mining incentives
- Onboard early community via Discord/Twitter
- Target: \$5M TVL, \$10M/month volume

Phase 2 — Community Growth (Month 3–6)

- Twitter/X thought leadership content (90-day content plan)
- Base ecosystem partnerships (Aerodrome, Morpho, Moonwell)
- Referral program: 20% fee rebate for referrers
- Podcast appearances, DeFi conference presence
- Target: \$30M TVL, \$100M/month volume

Phase 3 — Institutional Expansion (Month 6–12)

- Institutional API and professional trading tools
 - Prime brokerage partnerships
 - Arbitrum integration (cross-chain users)
 - DAO governance token generation event
 - Target: \$150M TVL, \$500M–1B/month volume
-

Slide 10 — Team

Built by DeFi veterans

[Founder / CEO] — 6 years in DeFi. Former smart contract engineer at Compound. Launched two successful DeFi protocols with \$200M+ TVL peak.

[Co-founder / CTO] — 8 years systems engineering. Former head of infrastructure at Kraken. Built high-frequency trading systems handling \$5B/day.

[Head of BD] — 4 years BD in crypto. Former Coinbase Ventures analyst. Deep relationships across Base ecosystem projects and VCs.

[Lead Smart Contract Engineer] — 5 years Solidity. Audited 25+ protocols. Contributor to OpenZeppelin standards.

Advisors:

- [Former dYdX engineering lead]
- [Base ecosystem growth at Coinbase]
- [DeFi-focused legal counsel, BVI/Cayman expertise]

Slide 11 — Token Economics (Future)

\$BDX — Governance and Fee-Sharing Token

Token launch planned for Q4 2026 (post-product-market fit)

Token utility:

- Protocol governance (fee rates, new markets, parameter updates)
- Fee discount: up to 50% fee reduction for staked \$BDX
- Revenue sharing: 20% of protocol fees distributed to stakers
- Liquidity mining rewards for market makers

Distribution (preliminary):

Allocation	%	Vesting
Community/Ecosystem	40%	4 years, 1-year cliff
Team	20%	4 years, 1-year cliff
Investors (seed + A)	20%	3 years, 6-month cliff
Foundation reserve	15%	Governance-controlled
Initial liquidity	5%	Immediate

Slide 12 — Fundraising Ask

Seed Round: \$2.5M

Use of funds:

Category	Amount	%
Engineering (5 hires, 12 months)	\$1,200,000	48%
Security audits & infrastructure	\$300,000	12%
Market maker incentives	\$500,000	20%
Marketing & BD	\$300,000	12%
Legal & compliance	\$200,000	8%

Valuation: \$12.5M post-money (20× revenue multiple at conservative \$50K/month target)

Round structure: SAFE with 15% discount cap

Target close: June 2026

Lead investor benefits: Board observer seat, pro-rata rights in Series A, advisory token allocation

Slide 13 — Why Now

The confluence of three trends makes 2026 the year for Base DeFi

- 1. **Base's hypergrowth:** 40M wallets, \$12.8B TVL, 4.2M daily active users — fastest-growing L2, with Coinbase's 100M users as native onboarding.
- 2. **Institutional DeFi demand:** Post-FTX collapse, institutions demand non-custodial solutions. RWA tokenization on Base is driving institutional wallet creation.
- 3. **Perpetuals supercycle:** Crypto derivatives now 10x spot trading volume. DeFi derivatives' share is growing at 118% YoY — but is only 2.7% of total market. The gap represents a \$3T+ opportunity.

First mover advantage on Base: There is no institutional-grade perp DEX on Base. We launch now, before competitors, with the deepest Base ecosystem integrations.

Slide 14 — Contact

Let's build the future of DeFi derivatives together

BaseDEX Labs

This pitch deck is confidential and intended solely for the recipient. Forward only with explicit permission from BaseDEX Labs.

Appendix A — Financial Projections

Month	Volume	Revenue	TVL
1	\$2M	\$1,200	\$500K
3	\$15M	\$9,000	\$3M
6	\$80M	\$48,000	\$20M
9	\$250M	\$150,000	\$60M
12	\$600M	\$360,000	\$150M
18	\$1.5B	\$900,000	\$400M
24	\$3B	\$1,800,000	\$900M

Conservative scenario. Bull case assumes 3x multiplier on volume.

Appendix B — Technical Architecture Deep Dive

Matching Engine

- **Language:** TypeScript / Node.js
- **Algorithm:** Price-time priority CLOB (Central Limit Order Book)
- **Throughput:** 50,000 orders/second (single node), horizontally scalable
- **Latency:** P50 < 2ms, P99 < 15ms order processing
- **Settlement:** EIP-712 signed orders, batch-settled on-chain
- **WebSocket:** Real-time order book, trades, and position updates at 50ms intervals

Smart Contracts

- **Language:** Solidity 0.8.24
- **Framework:** Foundry
- **Audit:** BlockSec Labs (April 2026) — 10 findings, all resolved/acknowledged
- **Oracle:** 3-source median (Pyth, Chainlink, internal TWAP)
- **Oracle staleness:** < 60 seconds enforced, auto-halt on stale data
- **Admin:** 3/5 multi-sig Gnosis Safe + 48h timelock

Security

- ReentrancyGuard on all state-changing functions
- EIP-712 domain-separated order signing with chain ID
- Nonce-based replay protection
- Flash loan protection via intra-block price deviation limits
- Rate limiting on off-chain API (1,000 orders/minute per wallet)
